Vaccine Information and Consent Form

The Animal Hospital and Pet Resort at Southwood
(850) 942-6650

At The Animal Hospital and Pet Resort at Southwood, we believe that your pet's vaccine schedule should be determined based on their lifestyle and risk of exposure to disease. Vaccinating at the appropriate intervals will greatly benefit your pet and protect against many life-threatening diseases. Decisions regarding which vaccines should be given and their frequency of administration are best determined by you and your veterinarian after careful analysis of your pet's lifestyle and risk of exposure.

The vaccines listed on this form are considered 'core' or 'non-core' by the American Veterinary Medical Association, American Animal Hospital Association, and numerous state veterinary associations. All pets should receive core vaccinations, with boosters at appropriate intervals determined by your pet's exposure risk. Non-core vaccinations are administered if your pet's exposure risk warrants it.

In addition to your pet's scheduled vaccines, he or she needs to have a complete physical examination and fecal parasite test twice yearly. These exams combined with a customized vaccine protocol will help us provide your pet with the best care possible. You will continue to receive a reminder card every six months for these services.

Risk Assessment Form - *Please check all that apply to your pet*:

always indoors   indoor/outdoor   always outdoors   goes for leash walks with owner

has close contact with another pet (if so please list type of pet and whether pet is kept indoors, outdoors, or both)____

∗Veterinarian to fill out∗

Based on our analysis of your pet's lifestyle, we believe that your pet should receive the following vaccines at these intervals:

Canine:

Core vaccinations for dogs:

Distemper/Adenovirus2/Parvo every 3 years (after initial booster)

Rabies every 3 years (after initial booster)

Non-core vaccination for dogs:

Bordetella yearly

Leptospira yearly

Feline:

Core vaccinations of cats:

Feline viral rhinotracheitis (herpes), calcivirus, and panleukopenia (parvo) every 3 years (after initital booster)

Rabies every 3 years (after initial booster)

Non-core vaccinations for cats:

Feline leukemia yearly

∞ ∞

The veterinarian has discussed the above protocol with me. Should my pet's lifestyle or exposure risk change, I agree to alert the veterinarians at The Animal Hospital and Pet Resort at Southwood of such changes.
